PROFESSIONAL PROFILE

I'm a recent graduate with a Master of Science in IT, Digital Design and Interactive Technologies, from IT University of Copenhagen, where I researched and designed for real operational environments, including mapping how a breakdown in one part of a system surfaces as a problem elsewhere. My approach grounds every design decision in user research, then uses AI-augmented analysis and prototyping to move quickly from insight to a tested concept. Having worked frontline in hospitality, I understand both the guest experience and the operational reality behind it, and that's the perspective I want to bring to this role.

CORE COMPETENCIES

- **Service design & journey mapping:** translate frontline and user research into journey maps and design concepts that surface where a process breaks down and why.
- **User-centered research:** use interviews, field and ethnographic observations, and iterative testing to understand behaviour across complex, multi-stakeholder environments.
- **Systems thinking:** identify how a gap in one part of an operation surfaces as a problem elsewhere, from frontline service work to formal research.
- **AI-augmented research and prototyping:** use AI tools (Claude, Lovable) to synthesize qualitative data, test patterns, and turn insights into testable concepts quickly.

EDUCATION

Masters in Digital Design and Interactive Technologies // *IT University of Copenhagen* [2024-2026]

- Thesis project: Situating the Drill – Digital tool for emergency preparedness training aboard passenger vessels
- Relevant courses: UX Design, Advanced Design Processes, Digital Innovation in Practice, Programming and Experimental Interactions

Bachelors in International Business Communication in English // *Aarhus University* [2019-2022]

- Relevant courses: Digital Communication, Risk Communication, Strategic Communication

EXPERIENCE

Waiter and bartender // *Hyttefadet Nyhavn* [April 2025 - Present]

- Delivered fast, reliable service in a high-pressure, high-tempo environment, staying calm and solution oriented.
- Resolved unexpected guest issues in real time with a focus on the overall experience

Waiter // *Crown Seaways DFDS* [February 2023 – July 2025]

- Worked within the physical constraints of a moving vessel, adapting service to a space and schedule that couldn't be adjusted the way a land-based restaurant can.
- Lived and worked alongside the same crew for extended periods at sea, relying on close, informal coordination to keep service running smoothly under pressure.
- Took part in recurring onboard safety drills, which became the direct inspiration for my master's thesis on digital training tools for emergency preparedness.

LANGUAGES

Danish Native
English Fluent
German Intermediate

IT-competencies

AI and Prototyping: Figma, Lovable, Claude Code and Design
Coding: Python, JavaScript

PERSONAL PROFILE

Since my work is mostly screen-based, I enjoy getting out into nature to relax. I especially love traveling to places where I can hike and camp on my own. Baking and cooking are also a big part of my everyday life, as I enjoy creating delicious things for my family and friends. I'm also an avid reader, and a good book often leaves me feeling inspired, which I try to bring into my work. I'm someone who loves new experiences and doesn't say "no" to the challenges I encounter.
